This activity demonstrates the links between the topics of rates of reaction and the equilibrium law. It provides students with an explanation of the equilibrium law. Reaction rates. 2. Collision theory. 3. Conditions that effect reaction rates. 4. Chemical equilibrium. 5. The Equilibrium constant. 6. Le Chatelier's principle. 5. are called dynamic reactions. When the rate of the forward reaction is equal to the rate of the reverse reaction, the reaction is said to have reached equilibrium. When reversible reactions reach equilibrium the forward and reverse reactions are still happening but at the same rate, so the concentrations of reactants and. In a chemical reaction, chemical equilibrium is the state in which both reactants and products For any reaction mixture to exist at equilibrium, the rates of the forward and backward (reverse) reactions are equal. In the following chemical. Rates and equilibria of organic reactions (Leffler, John E.; Grunwald, Ernest). Frank L. Pilar. J. Chem. Educ., , 41 (7), p DOI: /edp Electron transfer reactions of the carbonate radical anion with azide, bromide, and hypochlorite ions have been studied by pulse radiolysis. From the equilibrium.
